

**Listing of Claims:**

Claim 1: (Currently Amended) A system for providing an adaptive Electronic Program Guide (EPG) presentation for use with a receiver for configured to displaying programs from a plurality of program sources on a plurality of user-selectable channels comprising:

an EPG presentation generator for generating a displayable EPG presentation, wherein the EPG presentation ~~can be~~ is configured to be displayed as a three-dimensionally arranged set of three-dimensional surfaces textured by ~~specialty~~ pre-processed scheduling data;

a signal filter based on ~~an~~ a user-input provided by a user, wherein the user-input provided by the user is a request for a use of at least one of: a different font type and/or a use of a different background; and

a morphing engine including a database of different EPG presentation solutions, ~~and the morphing engine is configured to select one of said EPG presentation solutions from the database based on a control command generated by the signal filter, wherein the control command is generated by the signal filter based on a time trigger one of said EPG presentation solutions is selected from said database for display.~~

Claim 2: (Canceled).

Claim 3: (Canceled).

Claim 4: (Currently Amended) The system according to claim 1, wherein the morphing engine ~~comprises~~ further includes a set of parametrical functions, and ~~wherein the~~ control

command generated by the signal filter creates a request for a ~~specific function of the set of~~  
parametrical functions and one or more~~its~~ parameters associated with the requested function.

Claim 5: (Currently Amended)      The system according to claim 1, wherein the morphing  
engine ~~comprises~~ further includes a mix of presentation solutions and functions, and wherein  
~~at~~ the control command generated by the signal filter creates a request for one of said presentation  
solutions.

Claim 6: (Currently Amended)      The system according to claim 1, wherein the morphing  
engine ~~comprises~~ further includes a mix of presentation solutions and functions, and wherein ~~at~~  
control command generated by the signal filter creates a request for a ~~specific function and its~~  
one or more parameters associated with the requested function.

Claim 7: (Canceled).

Claim 8: (Currently Amended)      The system according to claim 1, further comprising a  
second signal filter that is based on a signal from a broadcaster.

Claim 9: (Canceled).

Claim 10: (New)      A method comprising:  
receiving electronic programming guide data from a broadcast source;  
receiving, at a broadcast receiving device, a user request to change at least one portion of  
an electronic programming guide at a predefined time;  
determining whether the predefined time has been reached; and

in response to determining that the predefined time has been reached, modifying the electronic programming guide in accordance with the user requested change to the at least one portion of the electronic programming guide.

Claim 11: (New) The method of claim 10, wherein the user requested change corresponds to a selection of a predefined display configuration from a database storing a plurality of predefined display configurations.

Claim 12: (New) The method of claim 10, wherein the broadcast receiving device comprises a set-top box.

Claim 13: (New) The method of claim 10, wherein the electronic programming guide comprises a three-dimensionally arranged set of surfaces textured by pre-processed broadcast program scheduling data.

Claim 14: (New) A computer readable medium storing computer readable instructions that, when executed, cause a processor to perform a method comprising:

- receiving electronic programming guide data from a broadcast source;
- receiving a user request to change at least one portion of an electronic programming guide at a predefined time;

- determining whether the predefined time has been reached; and
- in response to determining that the predefined time has been reached, modifying the electronic programming guide in accordance with the user requested change to the at least one portion of the electronic programming guide.

Claim 15: (New) The computer readable medium of claim 14, wherein the user requested change corresponds to a selection of a predefined display configuration from a database storing a plurality of predefined display configurations.
